Catalogue

OF

FLOWERROOTS,

GROWN FOR SALE BY

C. G. VAN TUBERGEN J^R.,

ZWANENBURG NURSERIES

HAARLEM (HOLLAND)

Sole Agent for the United States and Canada:

MR. E. J. KRUG.

Centennial Building, 110 to 116 Broad Street.

— NEW-YORK. —

Important!

New customers are respectfully requested to read carefully the Terms of Sale printed in the accompanying catalogue. The prices quoted therein represent the cost at the nursery in Haarlem.

As the size and value as well as the duties on bulbs vary, it is impossible to give the exact amount of charges to be added to the catalogue prices, but if our customers will base their calculations on the following percentages, they will arrive at a fairly correct estimate of the total cost at New-York of their importations. It must be understood however, inasmuch as the duty in most cases is specific, that the percentage will be higher on the cheaper varieties of Iris Kaempferi, germanica and other roots that pay the highest rates of duties. The percentage on high priced bulbs will of course be lower,

For importation charges including duties, add to catalogue prices:
about 25% to 30% on orders of \$ 15.— to \$ 25.—,
„ 20% „ 25% on orders of \$ 25.— to \$ 100.—,
„ 15% „ 25% on orders of \$ 100.— and more.

The freight or expressage from New-York to destination will also have to be borne by the purchaser.

Respectfully,

E. J. Krug,

Agent of Mr. C. G. VAN TUBERGEN Jr., HAARLEM,

110—116 Broad Street

NEW-YORK.

 The receipt of an order is to be taken as evidence, that the Buyer has read the following Terms of Sale and agrees to abide by them.

TERMS OF SALE.

This list cancels all previous quotations.

All the articles offered in this Catalogue are offered by the 1000, by the hundred and per 10. It must be distinctly understood that not less than 250 bulbs of one and the same variety are supplied at the per 1000 rate, and **not less than 25 bulbs** of one and the same variety **at the per 100 rate**. Smaller quantities than 25 will be charged at the per 10 rate.

Time of sending orders. The best time for sending orders on goods offered in the present list is from June until the end of September. It is however advisable to send all orders on bulbs for fall-planting early and if possible not later than August. — Orders for late ripening or for spring planting articles must not be sent later than March. Early orders infinitely facilitate the arrangements necessary for a prompt and complete delivery.

All articles marked with • are not ripe in the summer; these can only be sent out from October or November until April.

Unless contrary instructions are expressly given, I reserve to myself the right to substitute other varieties of as nearly as possible the same color and value for any sorts that cannot be supplied. I therefore beg my respected Clients will advise me in their orders if they object to this.

New and unknown correspondents who are inclined to favour my firm with their orders are requested to accompany their orders (which should be sent to my general Agent), by sufficient references or by a remittance.

Costs of packing cases are to be paid for by purchasers (they are invoiced at lowest cost prices) and it must also be distinctly understood that purchasers have to pay the carriage from Haarlem, also transportations, and all other importation charges whatever, but to lessen expenses of carriage I forward several orders in one consignment to Mr. E. J. KRUG, New-York, whence the cases will be sent on at the utmost despatch to their various destinations; after leaving my nurseries all goods travel at purchasers' risk.

Hoping to be favored with your esteemed orders, which shall always have my best and most careful attention,

I beg to remain

Respectfully yours,

C. G. VAN TUBERGEN JR.

HAARLEM, May 1914.

N.B. The „Cultural Directions” to which frequent allusions are made in this catalogue, will be enclosed free with bulbs, if asked for when ordering.

Miniature Hyacinths (single and double)

(bulbs of 5 to 6 inches in circumference).

Italian Hyacinths giving but little satisfaction, owing to their producing but very small spikes and being much later than the white Romans, Dutch miniature Hyacinths are recommended instead of these. Pots or shallow pans, filled with these miniature Hyacinths are a real beauty for conservatory or room-decoration. They may also be extensively used for bedding purposes.

Breeder Tulips. (May flowering.)

An old fashioned strain of late (May) flowering Tulips; the colours are very interesting and unusual, a good many so called art-shades may be found among them. This race has for a long time been neglected, but is now regaining public favour.

These hybrid Hippeastrums are of the greatest value for conservatory and room decoration during the early months of the year. They can be brought into bloom in a temperature of between 55 to 65° F. The stately habit of the plants and the immense flowers of gorgeous colours make them invaluable for decorative purposes.

940 St. Bavo , splendid mixture.....	2 50	- 40	

A splendid new race of early spring flowering *Anemones*. About twelve years ago a slight colour variation was observed in my nurseries in a batch of *Anemone fulgens Aldborohensis* and from this single plant in course of time an entire range of colours, varying from white through rose, salmon and brickred to deep carmine has been gradually evolved. These *Anemones* flower continuously from early March until the end of April and by their brilliant and varied shades of colour form one of the brightest and most attractive groups of spring flowering bulbs. They grow taller than the ordinary *Anemone fulgens*, the flowers are much larger and they have broader petals; these Anemones must be planted in the autumn.

1624	Van T. K., cream, large orange blotch					4 50	60
1625	Van Helst, canary and sulphur yellow, very large flower					2 50	

An entirely new race of Xiphion Irises, raised in my nurseries and carefully selected and improved during the last thirteen years. This is best described as a giant strain of very early flowering *Iris hispanica*, but in all respects greatly superior to these, as the flowers are of enormous size and remarkable substance; the foliage is very broad and of a glaucous green. The range of colours is as much varied as with *Iris hispanica*; some of the varieties have delicate soft shades of blue and white, whilst the deep blues are very showy, being of an exceedingly rich tone, relieved by a large, massive golden orange-yellow, central spot. Their time of flowering is fully a fortnight before even the earliest varieties of *Iris hispanica*; this is very important, because at the time Dutch Irises are in full bloom. Narcissus and late Tulips are over and our gardens would be rather devoid of bulbous plants in flower, but for this new strain of Irises. The Dutch Irises like the same soil as *Iris hispanica* or *anglica* and are best planted middle of October; in cold districts they want protection from frost.

Various species of Bulbous rooted Iris.

Iris Regelio-cyclus.

A new race of hardy, free flowering hybrid Irises of great beauty, crosses between the Regelia and Oncocycloids groups and of very easy culture; the flowers which are strikingly veined on white, soft violet, purple or brown grounds, are always the object of much attention when exhibited in London at the meetings of the R.H.S. In the course of the last seventeen years these hybrids have proved to be very manageable to culture as compared with the Oncocycloids Iris, that invariably die out.
