Dear Friends,

It's catalogue time once again. Another year has gone by and gone by fast. It does not seem possible that it is time to be writing up the catalogue again. I guess when you're busy time flies.

In regards to questions pertaining to culture please read the instructions in this catalogue. These instructions cover most of the common problems.

The question as to the hardiness of individual varieties is difficult, all we can go by is how they preform for us. Although most iris are generally hardy, there are always a few that will not preform in our garden. The majority of these weaker iris are illiminated, except for a few for which there is a demand by the keen Irisarian. In the case of these iris we keep them even though they do not preform as well as we think they should.

Please remember Siberians and Spurias CAN NOT be shipped with bearded iris, so please use the appropriate order form.

Both of our boys are now in Scouts. Gloria is still a Beaver Leader and on the District Service Team and I'm now a Scout Leader in Norwich, so most of our spare time is directed towards the Scouting Program. If you are involved in Scouting please make a notation on your order or drop us a line. We would like to hear from you.

We would ask our Ontario Customers to please add the 7% retail sales tax to the total order including shipping and handling. It is not our idea and it has to be paid. We are asking that you please co-operate.

If anyone receiving this catalogue is hybridizing and have any seedlings, that have sufficiently modern style and form we would be glad to grow them as guests in our garden. If we feel they have enough public appeal we would be pleased to introduce them for you, once they are registered.

If you are unable to visit us during the bloom season and are in the area at some other time, please stop in, we are always happy to meet and visit with our customers. Any societies or groups wishing to visit the garden, please make arrangements ahead of time.

We have a historical commentary and slide program on modern iris we present, if you require a speaker. If distance prohibits, we have the commentary taped for loan.

We wish all of you the best in gardening for 1985.

Sincerely,

McMillen's Iris Garden

CULTURAL INSTRUCTION FOR BEARDED IRIS

PLANTING TIME - Mid July through mid September. Earlier and later are possible, but earlier will reduce the following years bloom and later will lower the chance of winter survival.

Replant every 3 - 4 years depending on variety. Plant in a well prepared, clean, sunny location using a fertilizer containing very little nitrogen, 5-20-20. If manure is to be used it must be completely rotted and worked in well ahead of time. Wood ash is beneficial being very high in many trace elements.

Plant level with ground surface in clay, about 2" deep in sand. Cultivate shallow, iris are shallow rooted.

Water only when planting, no water is needed after this, unless it's extremely dry.

A mulch of wheat straw or weed free hay is beneficial in winter.

Do not cut foliage back after blooming, but remove bloom stalks with a quick snap.

Occasionally remove dead and badly spotted leaves from the out side of the fans.

Foliage may be cut back to 6 - 7" from ground in late fall.

INSECT and DISEASE CONTROL - Number ONE rule - remove and burn all dead material from around the iris in the spring. Borer eggs and fungus spores of leaf spot are on these and can be eliminated only by burning.

IRIS BORER - Excellent control from Cygon 2E as instructed. Watch for ragged leaves or water streaking, dig out borer.

LEAF SPOT - Controlled by the use of Benlate or Captan. The two chemicals for borer and leaf spot may be combined and sprayed when the iris are 3 - 4" high and again when they are 6 - 8" high. Clean badly infected leaves from edge of fans.

BACTERIAL SOFT ROT - A soft mushy rot with a very strong odor. Caused by too lush a growth, too rich a soil, too much water, failure to clean dead leaves in the spring or injury to rhizome allowing the bacteria a place to become established. Agricultural gypsum sprinkled on infected plants is beneficial. Dig and scrape rot from rhizome and air dry for several days. Dust with sulphur or gypsum and replant.

NOVELTY IRIS

This section contains the reblooming iris, the space age iris and other novelties.

The rebloomers marked "R" bloom in the spring and again beginning in late summer and fall here in our garden. They require a little more water and a little more fertilizer than regular T.B.'s and must be replanted every two years.

Space age are tall bearded with the difference being the horns, spoons and flounces protruding from the ends of the beards. These flowers are excitingly different.

CULTURAL INSTRUCTIONS FOR SPURIA IRIS

Spurias are a beardless species ranging in height from 3-4' tall. They are attractive orchid like flowers blooming in early July. The color range is wide, reds, pinks, yellows, bronzes, blues, purples and various combinations.

FALL SHIPMENT ONLY - Shipments will begin in late September or October.

PLEASE ORDER ON FALL ORDER FORM

Plant as soon as possible in full sun as hot temperatures are required for good bloom. Plant one inch deep in heavy soil and two inches in sand. They require good drainage. Plants will be taller once established. Space far enough apart to grow in the same location for 7 to 8 years. Very attractive once established. Will benefit from light applications of fertilizer (10-10-10) or composted manure. DO NOT get fertilizer on rhizome. Cut foliage within 5-6 inches of ground in late September.

Spurias will benefit from the addition of peat moss to the soil. Heavy watering will be beneficial in late spring and early summer dry spells.

Diseases are no worry but borer can be a problem. Cygon 2E will control them if applied when spraying the tall bearded followed by a third spraying in another 7-10 days.

Newer varieties listed are in short supply please order early.

SHIPPING - United Parcel Service (U.P.S.) will be used wherever possible, Street name or lot & concession & phone number is necessary with your mailing address for this delivery to your house. Maps are also helpful.

All other orders will be shipped parcel post, if you wish first class please send extra postage, \$.50 per rhizome. Extra postage will be reimbursed with iris.

Shipping will start late July or early August. No orders will be shipped, if post marked after September 1st, except for Southern Ontario.

Orders will be shipped in the order they are received. An order received in late June will be approximately number 200 and will not be shipped until mid August. If you are going to be on vacation, during shipping season let us know when you order and we'll ship accordingly.

U.P.S. orders will be shipped until September 13th in Southern Ontario.

The greater the distance the more the shipping, therefore, we have broken down the charges into 4 different rates.

1. \$2.50 for Ontario
2. \$3.25 for Quebec
3. \$4.00 for Nova Scotia, New Brunswick, Manitoba & Saskatchewan
4. \$4.75 for Alberta, British Columbia & P.E.I.

Fresh dug orders may be picked-up between July 29th and September 13th. Garden will be open Monday to Saturday from 9:00 A.M. to 5:00 P.M., except during bloom season, open 7 days a week

DEALERS - If you wish to order please send list and we will quote a price. Most newer iris are not available in volume and will be at catalogue prices. Shipping will be extra. Extra iris do not apply on these quotes.

GUARANTEE - We guarantee our plants true to name and healthy. If not satisfied please notify us as soon as possible.

Anyone wishing an order acknowledgement please send a stamped self address envelope.

Bring iris to your garden in mid May, order Intermediate or Standard Dwarf. Consider the merits of these iris; Color range - as wide as the Tall Bearded; Height - valuable to the gardener with a garden in a windy location. Their short stalks are sturdy and with stand winds much stronger than the T.B. The Border Bearded also with stand the wind and bloom at the beginning of the T.B. season.

Intermediates and Standards are also hardier for cold climate areas.
